

Define problem/problem understanding:

Literature Survey

A literature survey for "Agriculture Docs Chain" would involve researching existing literature, studies, and relevant sources on the topic of block chain technology's applications in agriculture and document management.

- **Block chain in Agriculture:** Research in this area often begins by discussing the potential benefits of block chain in agriculture, including enhanced transparency, data security, and trust among stakeholders.
- **Data Management:** The literature explores how block chain can revolutionize data management in agriculture by securely recording various types of data, such as crop yields, weather information, and supply chain details.
- **Farm-to-Table Traceability:** Researchers often emphasize the role of block chain in providing end-to-end traceability for agricultural products, ensuring food safety and quality.
