Define problem/problem understanding:

Business Requirements

Here are some key business requirements for "Agriculture Docs Chain," a block chain-based system for managing agriculture-related documents:

1.Document Storage:

The system must provide a secure and decentralized platform for storing various types of agriculture-related documents, such as certificates, permits, land records, and product quality reports.

2. Document Classification:

Documents should be categorized based on their type (e.g., land ownership, crop certification, pesticide records) to facilitate efficient retrieval and management.

3.Identity Verification:

Users registering on the platform should undergo identity verification to ensure authenticity. Know Your Customer (KYC) procedures may be required.
